

FH FORM SYSTEM TO HOUSING CONCRETE WALLS

PERFILLINE is a Brazilian company with solid expertise on the design and production of customized equipment for the construction industry, based on excellence, technological innovation and efficiency.

The FH Form System is a versatile building forming system that was developed to provide high performance to the building construction industry, offering high quality, versatility and durability, characteristics that make it widely used on low-cost residential construction projects.

To meet the large-scale construction industry demand PERFILLINE has developed a form system consisted by distinctively designed steel tubes and the option of phenolic plywood or steel plates, guaranteeing the systems adaptability and efficiency on the application of all the different kinds of concrete.

The FH Form System on its steel surface version due to the materials mechanical and corrosion resistance and consequent high durability enhances the forms long lasting reuse without any damage to the original characteristics of the project.
